There are over 200 default brushes that you're provided with. Painting is easy, and although it works by drawing with your fingertip, it's possible to use any media you'd like. While there are no push or paintbrushes available in the current version, there has been speculation on whether this will be implemented in future releases, so bookmark this page. The brushes are separated out into seven main categories: The Spot Hue tool is a super-soft application brush that renders a spot of color. The Tile is for duplicating and arranging colors at a time. The Geometric gives you control over strokes and dimensions. The Metal is meant for metallic objects. The Gradient offers a smooth gradient created by using the Brush Stroke feature. The Adjustment offers presets for selected enhancement, and the Puppet offers dynamic, 3D-like control. You can create custom brushes with the Pencil tool. With the Pencil, you can blend colors, add or subtract color, and tap into Blending Modes as well as Gradient and Pattern fill modes. The Option, or Mask, tools are used for selecting areas of the image that are ready for edits, or for creating a mask. The Filter Gallery has been expanded, and allows you to add new predefined filters, as well as edit and save your own effects.

You can control how you would normally select a filter to apply: by using the command tab or the folder icon to select the filter, or by using a preset. All of the filter categories have been improved, and there are three main categories: Vignette; Grayscale; and Saturation. It's easy to add more filters, and customize them with settings that can be accessed on the sidebar.
